PROFILE SUMMARY

Full Stack Developer with around 3 years of commercial experience delivering scalable web applications across the full stack. Proficient in React, JavaScript, Node.js, and REST API design, with hands-on experience in cloud deployment (AWS), database optimisation, and authentication systems. Strong track record of taking ownership of features end-to-end, collaborating in team environments, and working effectively within large codebases. Holds Australian work rights on a Subclass 485 visa and is actively seeking full-time roles

TECHNICAL SKILLS

Frontend	React.js, React Native, JavaScript (ES6+), HTML5, CSS3, Responsive Design, Tailwind CSS
Backend	Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control (RBAC), C#
Databases	MongoDB, MySQL, DynamoDB
Cloud & DevOps	AWS(EC2, S3, SQS, API Gateway, DynamoDB), Docker, Git, GitHub, CI/CD Pipelines, Microservices
Tools	Visual Studio, ServiceNow, Hoppscotch, VS Code, Agile / Scrum, Jira, Confluence

WORK EXPERIENCE

Qual-T Solutions • Internship • WIL • Full Stack Developer Intern

Brisbane, Australia

Feb 2025 - Jun 2025

- Designed and developed a web-based local trade services platform that connects customers with verified service providers.
- Built the application using the MERN stack (MongoDB, Express.js, React, Node.js) and RESTful APIs, contributing to both frontend and backend development.
- Implemented secure user authentication and role-based access control(RBAC) for admin, customers and service providers using JWT and bcrypt, ensuring data security and controlled feature access
- Built email verification workflow with Nodemailer and token-based password setup during signup for both customers and tradies.
- Developed custom dashboards: customers browse and book services by location/service type , tradies manage listings, schedules, and bookings.
- Improved platform responsiveness by adding database indexes on high-traffic query fields, reducing average query response time by 18% and enabling faster search and filtering for end users.

TietoevryConnect India Private Limited,Pune,India

Junior Software Engineer

Mar 2021 - Dec 2023

- Developed and maintained features for a full-stack enterprise supply chain platform, owning order handling workflows within the BDS (Basic Data System) ,the core data layer supporting ordering, invoicing, and transportation modules.
- Built and maintained RESTful APIs using Node.js, Express, and MySQL, implementing middleware, input validation, and error handling for scalable backend services.
- Designed dynamic user interfaces using React, leveraging reusable components, hooks, and efficient state management for seamless API integration and improved user experience.
- Optimised frontend performance through lazy loading and code splitting, reducing dashboard load time by 20% and improving overall application responsiveness.
- Collaborated with cross-functional teams to design, test, and deploy new features, contributing to scalable and maintainable application architecture.
- Provided L2/L3 production support for enterprise supply chain application, resolving incidents and ensuring system stability in 24/7 operational environments.

Achievements:

- Recognised with a "Pat on the Back" award for contributions to frontend performance, leveraging lazy loading and code splitting techniques that measurably improved dashboard responsiveness across the platform.

PROJECT

TranscodeX – Cloud-Based Video Processing Platform (AWS) | [GitHub](#) | [Video Demo](#)

- Designed and implemented a backend-only cloud video processing platform on AWS, developed incrementally across three project phases.
- Built RESTful APIs using Node.js and Express, containerised with Docker and deployed on EC2
- Used Amazon S3 for secure video file storage and DynamoDB for job and file metadata persistence.
- Designed a microservices architecture with a REST API service and multiple EC2-based worker services for CPU-intensive video processing.
- Implemented queue-based load distribution using Amazon SQS, enabling reliable, asynchronous job processing across multiple worker instances.
- Exposed the application securely over HTTPS using API Gateway with HTTP proxy integration and TLS certificates managed by AWS Certificate Manager.
- Applied stateless design principles, using cloud-managed services for all persistent state and ensuring resilience to instance failure.
- Implemented dead letter queues (DLQs) to safely handle failed processing jobs.

SpendWise – Personal Finance Mobile Application (React Native) | [GitHub](#)

- Developed a cross-platform mobile application for personal expense and budget management using React Native (Expo Go) and RESTful APIs
- Built a secure backend using Node.js, Express, and MongoDB, implementing CRUD operations, JWT-based authentication, input validation, and server-side pagination
- Designed user dashboards and expense tracking modules with global state management, safe area handling, and seamless navigation for consistent user experience across devices
- Implemented push notifications and data validation to ensure reliable application behaviour and real-time updates

EDUCATION

Master of Information Technology (Major : Software Development)
QUEENSLAND UNIVERSITY OF TECHNOLOGY (QUT) - BRISBANE, QUEENSLAND

Feb 2024- Dec 2025

Bachelor of Engineering - Computer Engineering
D.Y. Patil College of Engineering, Pune, India

2016-2020

Additional Information

- Work Eligibility: Subclass 485 Visa Full Time Work Rights in Australia
- Member of the QUT Sports Club and enjoy playing football for collaboration, discipline and fitness.
- Open to relocation across Australia and flexible with work location
